BRD – Auto Service & Hardware Platform

Jyoti
Cloudisian
29.01.2026

1. Project Overview

This project is an online platform similar to Zomato, but instead of food, it provides automobile products and services for **cars and bikes**.

The platform will allow users to:

- Buy hardware products (parts, accessories)
- Book mechanic services
- Find nearby garages
- Track orders and service requests

The project will be built **phase-wise**, starting with **Website**, then **Mobile Applications**.

2. MVP & Timeline

2.1 MVP Scope

The MVP will include only the core features required to launch the platform:

Customer (Website)

- Product listing
- Basic filters (brand, year, model)
- Service type selection (self-fix / mechanic-fix)
- Nearest garage listing
- Place basic orders

Partner (Garage)

- Garage profile
- Accept/reject service requests
- Update service status

Admin

- Approve partners

- View orders
- Basic user management

Support

- Basic chatbot
- Manual ticket creation

2.2 MVP Delivery Timeline

Target deadline for MVP delivery: **April 2026**
(Exact date to be finalized and approved by both parties.)

3. Platforms

Phase 1 (MVP)

- Website (Primary)
- Customer UI
- Partner UI (Garage/Mechanic)

Phase 2

- Mobile App (Customer)
- Vendor App
- Advanced features

4. User Types

4.1 Customer

End users who use the platform to purchase products or book services.

Customer can:

- View and browse products
- Apply filters (brand, year, model, vehicle type, etc.)
- See tag-wise classification of products:

    - Which products can be self-fixed
    - Which products require a mechanic
- Choose service type:
    - **Self-Fix**
    - **Mechanic-Fix**
- Access LMS (Learning Module) for self-fix:
    - Step-by-step guides
    - Video tutorials
- See nearest garage or mechanic based on location
- Place product and service orders
- Raise support tickets
- Track order and service status

4.2 Partner (Garage / Mechanic)

Service providers who deliver repair and installation services.

Partner can:

- Create and manage garage profile
- Add and manage mechanics list
- Accept or reject service requests
- Update service status (assigned, in-progress, completed)
- Manage basic inventory related to services

4.3 Vendor

Product suppliers who sell hardware items on the platform.

Vendor can:

- Upload and manage products
- Manage stock availability
- View incoming orders
- Process delivery and fulfillment

4.4 Admin

System owner with full control over the platform.

Admin can:

- Manage all users (customers, partners, vendors)
- Approve or block vendors and partners
- Manage categories and service rules
- View business and performance reports
- Monitor tickets and disputes
- Control system configurations

5. Customer UI Features

5.1 Product Module

- Product listing
- Search bar
- Filters:
    - Brand
    - Vehicle type (car/bike)
    - Year
    - Model

5.2 Service Module

Customer can choose:

1. **Self Fix**
    - Customer buys product and fixes themselves
2. **Mechanic Fix**
    - Customer selects mechanic
    - Nearest garage shown using location

5.3 Learning / LMS Module For Self Fix

- Show tutorials or guidance
- Helps user understand basic fixes

6. Partner UI Features

Partner dashboard will include:

- Garage profile
- List of mechanics

- Service requests
- Inventory management
- Order status

7. Vendor Application

Vendor will have separate access.

Features:

- Product upload
- Stock management
- Order processing
- Reports

8. Website Features

8.1 Chatbot

- Handles basic queries
- If issue is critical:
    - System generates a support ticket

8.2 Ticket System

- Auto ticket creation
- Admin & support can reply
- User can track ticket status

9. Order Modes

There will be **three order modes**:

1. Product only
2. Product + service
3. Service only

(Exact workflow to be finalized with client)

10. Order Flow (Example)

1. Customer selects product
2. Chooses order type
3. Selects:
    - Self fix or mechanic
4. System finds nearest partner
5. Order assigned
6. Service completed
7. Customer gives feedback

11. Phase-wise Development

Phase 1 – Website(MVP)

- Customer UI
- Partner UI
- Basic chatbot
- Order flow
- Filters

Phase 2 – Mobile & Vendor

- Mobile app
- Vendor app
- Advanced chatbot
- Analytics
- Performance optimization

12. Out of Scope (To Be Confirmed)

(Not included unless discussed later)

- Payment gateway
- GST invoicing
- Real-time GPS tracking
